Summer 2009

Lot 2, Snowy Mountains Highway, Tumut NSW 2720

Ph: 0269472833 F: 0269473254 Email: admin@forestcentre.com.au

Lex & the Forest Centre staff wish all their customers a bright and prosperous 2009. We are all looking forward to a big turnaround in the industry to get everyone back up to speed and working at full capacity.

## 2008 Snowy Hydro Tumut Region Business Leadership Awards

Forest Centre recently won numerous accolades at the 2008 presentation dinner for the Snowy Hydro Tumut Region Business Leadership Awards. These Awards are separated into various categories and recognize outstanding achievement and leadership by individuals and businesses in the Tumut region during the preceding twelve months.

To start the evening off the 2008 Young Employee of the Year was awarded to Forest Centre Parts Interpreter, Reymund Kell.

Forest Centre also won awards for two other categories during the evening; Best Retail Business and Outstanding Achievement — largely due to the significant growth in sales nationwide.

At the conclusion of the evening, Forest Centre was announced the winner of the major award, 2008 Business Leader of the Year.

Forest Centre wishes to extend their thanks to all of their Customers for their continued support and looks forward to sharing prosperity with them in the coming years.

## NEW — Timberblade Gator Teeth

“Gator Teeth” by Canadian manufacturer Timberblade, are now available from Forest Centre.

The patent pending design incorporates 8 extra cutting tips into each tooth. The total of 12 tips per tooth share the cutting and make for a tooth that stays sharper for longer, cuts faster and lessens saw speed recovery time.

Gator Teeth® are also impact resistant. Operators have commented that the second cutting tips are not damaged after hitting rock leaving the teeth “still cutting smooth” and avoiding maintenance & downtime.

Gator Teeth are now available in both steel and carbide versions to fit selected Tigercat, John Deere, Timberjack and Waratah disc saws.

For further information, please contact the Forest Centre Spare Parts department via phone or email.

## What's new at Tigercat

Recently released into the Australian market, the Tigercat LH845C is designed for clear fell harvesting applications on steep slopes.

The LH845C harvester is equipped with the all-new R6152L leveling undercarriage. The R6152L is lighter and narrower than the L830C/L870C's R7150L but has similar length track frames for excellent stability on slopes.

The clamshell style retracting roof enclosure provides excellent access to the engine house. A swing-out door on the right side of the machine allows the operator to easily access daily engine service points. The hydraulic pumps are separated from the engine enclosure and easily accessed at working height from ground level.

The ER boom system is more efficient than conventional booms, especially in high-cycle small stem applications. Operator fatigue is significantly reduced.

Equipped with an efficient Mercedes 906 Tier III engine, the LH845C puts 150 KW to the head for excellent delimiting power in larger timber.

The well finished operator's station is large and quiet with excellent visibility and the full length front window serves as the primary entry/exit.

Tumut Valley Logging's new LH845C equipped with a Waratah 480 in thinnings
